It currently consists of 8 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.

sequencing vector: M13; 08
Sequencing vector: plasmid; 1008
Chemistry: Dye-primer ET; 08 of reads
Chemistry: Dye-terminator Big Dye; 1008 of re
Chemistry: Pre-terminator Big Dye; 1008 of re
Assembly program: Phrap; version 0.990319
Consensus quality: 283337 bases at least 040
Consensus quality: 284790 bases at least 030
Consensus quality: 284790 bases at least 020

NOTE: This is a 'working draft' sequence. It currently consists of 12 contigs. The true order of the pieces is not known and their order in this squence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                   CC providing immunological probes for differential identification of the Ctissues or cell types present in a biological sample. PTK is used in CC methods for the diagnosis, prevention and treatment of various disorders CC related to pTK such as immune system disorders (severe combined CC immunodeficiency (SCID), inflammation); hyperproliferative disorders (neoplasm, sarcoidosis); cardiovascular disorders (arhythmia, CC atherosclerosis); central nervous system disorders (arhythmia, CC neurodegenerative disorders (Alzheiner's disease, Parkinson's disease); CC incorderosclerosis); crohn's disease; respiratory disorders (asthma, CC allery); gastrointestinal disorders (inflammatory bowel disease); CC erebrovascular disorders (thrombosis, vascular dementia); brain CC disorders (phenylketonuria); behavioural disorders (Tourette's cyndrome); musculo-skeletal disorders (arthritis, trauma, tendonitis); CC erenal disorders (nephrotic syndrome, glomerulonephritis); metastases of CC malignancies and related disorders (leukaemia, multiple myeloma); and consections caused by bacteria, viruses, fungi and parasites. PTK is also useful for screening therapeutic compounds. PTK is used as an antigen in CC a vaccine to raise an immune response against infectious disease. PTK cnucleic acids are useful in gene therapeutic.

An isolated nucleic acid molecule (lencodes a polypeptide useful in the disorders e.g. immune disorders -(I) comprising a polynucleotide ne diagnosis and treatment of which

Claim 1; Page 457-458; 534pp; English

AAD33692-AAD33736 represent cDNAs corresponding to 21 human secreted protein genes, and AAE21191-AAE21235 represent the proteins they encode. AAE21236-AAE21280 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 21 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of immune or autoimmune diseases e.g. AIDS (acquired immune disease) and breast cancer, neurological diseases e.g. Alzheimer's disease, can breast cancer, neurological diseases e.g. Alzheimer's disease, and braskt cancer, neurological diseases e.g. Alzheimer's disease,

                                                                              Fiscella M;
```

An isolated nucleic acid molecule (I) comprising a polynucleotide which encodes a polypeptide useful in the diagnosis and treatment of disorders e.g. immune disorders -

Claim 1; Page 442-443; 534pp; English.

cc amount of the new protein in a sample or by determining the presence of commutations in the new genes. Specific uses are described for each of the c21 genes, based on the tissues in which they are most highly expressed, cc 21 genes, based on the tissues in which they are most highly expressed, cc and include developing products for the diagnosis or treatment of immune of include developing products for the diagnosis or treatment of commune of include developing products for the diagnosis or treatment of immune of include cancer. An anaemia and rheumatoid arthritis, breast neoplasia cc and breast cancer, neurological diseases e.g. Alzheimer's disease, cc parkinson's disease, Huntington's disease, Tourette syndrome, cc meningitis, demyelinating disease, peripheral neuropathies, neoplasia, cc trauma, congenital malformations, spinal cord injuries, toxic neuropathies induced by neurotoxins, peripheral neuropathies, multiple cc sclerosis, ischaemia and infarction, haemorrhages, schizophrenia, mania, congenital main disorders in feeding, sleep patterns, balance and perception, encephalitis, disorders in cardiovascular, neural/ AAD33692-AAD33736 represent cDNAs corresponding to 21 human secreted protein genes, and AAE21191-AAE21235 represent the proteins they encode. AAE21236-AAE21280 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the sensory, reproductive and digestive systems, behavioural disorders and hyperproliferative disorder. The present sequence represents a human secreted protein-encoding cDNA of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to isolated polynucleotide (I) and CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC for identifying expressed genes. (I) is useful in gene therapy techniques CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in CC diagnostics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and CC amino acid sequences. AAS64197-AAS94564 represent novel human CC diagnostic coding sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed constitution but was obtained in electronic format directly from WIPO CC and to produce other stated on the patent did not appear in the printed constitution but was obtained in electronic format directly from WIPO can be appeared to the products of the construction of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 2001-639362/73.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                              Score

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            268
